You're More Than a Restaurant, You're a Story.

You've mastered the art of creating a social experience-an aesthetic and a vibe that customers love, share, and come back for. It's an entire brand story.

The 'To-Go' Experience

Your in-house food is art,
Your brand is a vibe,
And your “to-go” experience can carry that same story effortlessly.

When packaging becomes more than just a container, it transforms into an extension of your brand — something customers notice, feel, and remember.

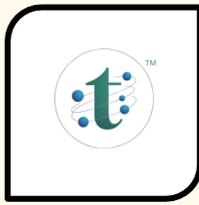

It becomes a touchpoint that’s social-worthy, value-driven, and aligned with the identity you’ve worked so hard to build.

With the right packaging, your brand doesn’t stop at the counter —it travels, it speaks, and it inspires.

Why us?

- Food-grade and food safe Packaging (100% Plastic free)
- No More Harmful PE Coating (Water Soluble Coating)
- Loyalty & commitment
- End-to-End Manufacturing
- Planet-Positive Promise

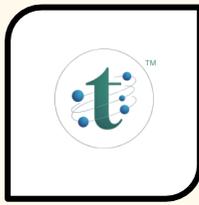

About Us

trediz sustainable packaging solutions are designed for modern food delivery while staying true to environmental responsibility. Our packaging is grease and water resistant, ensuring leak-free performance even for oily gravies, curries, and fried foods, without compromising food safety or quality.

All trediz packaging is microwave safe, allowing consumers to conveniently reheat food without transferring it to another container. The materials used are PFAS-free, eliminating harmful “forever chemicals” and making the packaging safer for both consumers and the environment.

Engineered for end-of-life responsibility, trediz packaging is industrially compostable, breaking down under controlled composting conditions and returning safely to nature. By replacing plastic and fluorochemical-based barriers with advanced sustainable coatings, trediz delivers packaging that performs like plastic—but behaves like paper.

Manufacturing & Quality Standards

Introducing Smart Packaging for Greener Tomorrow

WE KNOW THE STRUGGLES YOU FACE

Leaky curries, flimsy boxes, and generic packaging that sometimes difficult to fits the menu, all while customers demand sustainable solutions.

We turns these struggles into strengths with custom-fit, heat-resistant packaging tested for 100+°C and 50+ hours, eco-conscious materials backed by tree-plantation initiatives and strong, burst-proof paper bags and secure meal boxes.

With our in-house printing and finishing, we deliver quick, branded solutions that protect your food, delight your customers, and respect the planet.

**Together, we aim to make food delivery smarter, communities stronger,
and our planet greener**

How Our Packaging Material Keeps Food Safe

Heat Resistance

Withstands high temperatures to prevent melting and contamination.

Oil & Grease Resistance

Stops penetration of oil/grease, maintaining food integrity.

Oxygen Resistance

Slows oxidation, extending shelf life and flavor retention.

Moisture Resistance

Blocks humidity to preserve freshness and texture.

Have We Really Evolved?

We proudly adopted pizza from Italy — and along with it, we copied the same box. But while the product has evolved, the packaging hasn't.

For decades, we've used the same basic corrugated box originally designed for Italy's milder weather and shorter delivery distances. In countries with hotter, more humid, or dustier climates, the challenges are completely different. Heat retention, moisture control, ventilation, grease resistance, and delivery time are all local factors that demand technical adaptation. Yet very little innovation has gone into redesigning pizza packaging to meet these conditions.

So the question is: Have we evolved, or are we still using packaging that was never designed for our environment?

Real progress begins when we stop copying and start engineering solutions that fit our climate, our food habits, and our delivery realities.

Our Approach

PACKAGING THAT THINKS FOR YOU

No More Harmful Coatings - We completely discard PE-coated paper, the market's go-to material that can't be recycled. Instead, we use water-soluble, tech-driven coatings that are 100% recyclable and eco-conscious.

Odour-Free, Food-Safe Products - We understand the science of packaging so your food always smells and tastes exactly the way it should be.

Knowledge-Driven Partnerships - We believe a well-informed client makes a sustainable choice. That's why we actively share insights that reduce your carbon footprint while enhancing your brand reputation.

Menu-based Packaging

We Study Your Menu - Understanding your exact dishes—curries, snacks, beverages, and desserts—to identify specific packaging needs.

We Optimize Your Inventory - Strategic system covers all your menu items, reducing waste and storage hassles.

We Design for Performance - Packaging that is leak-proof, heat-tested, and brand-aligned, unlike generic, European-oriented products.
We Protect Your Brand & Planet Intelligent designs that enhance delivery experience while eliminating harmful materials.

We Optimize Your Inventory - Strategic system covers all your menu items, reducing waste and storage hassles.
